At first, there are no posts. Then we click “new post” and try to post with an empty title.

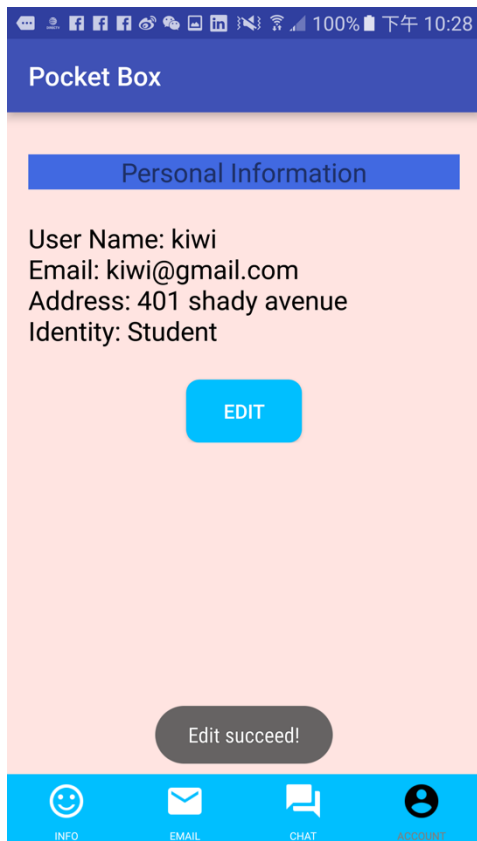

After posting, we view the post and could make a reply.

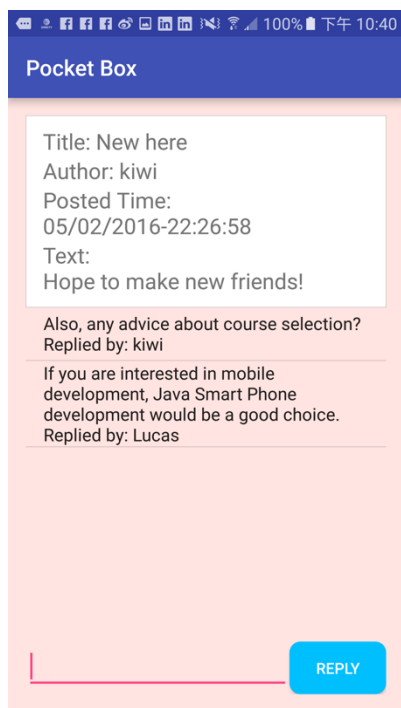

After pressing back, we then press refresh button, then we could see the post we just write. When clicking this post, we could see the details.

Hello,

I am the Property Manager of the Kenmawr Apartments. In order to apply for unit C-205, You will need to fill out the attached application and scan back, You will also need to scan a copy of your passport and I20.

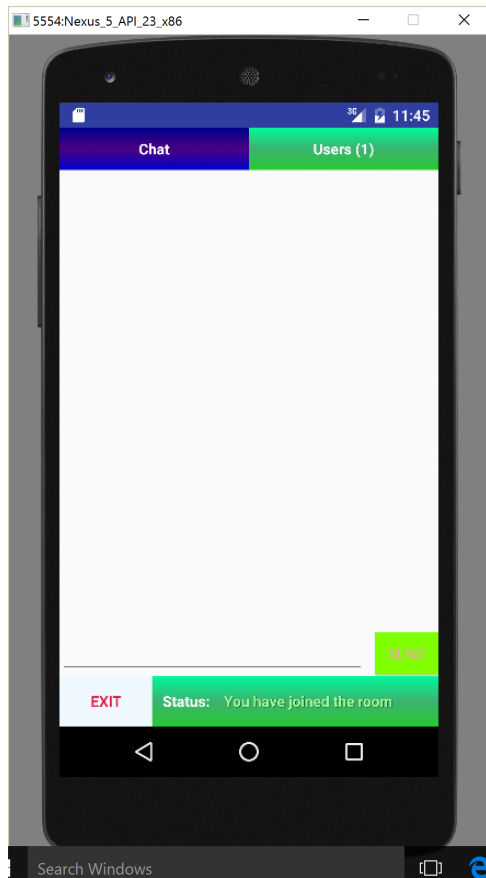

Please contact me with any questions or reply email

The test case for main functionalities and exception handling.

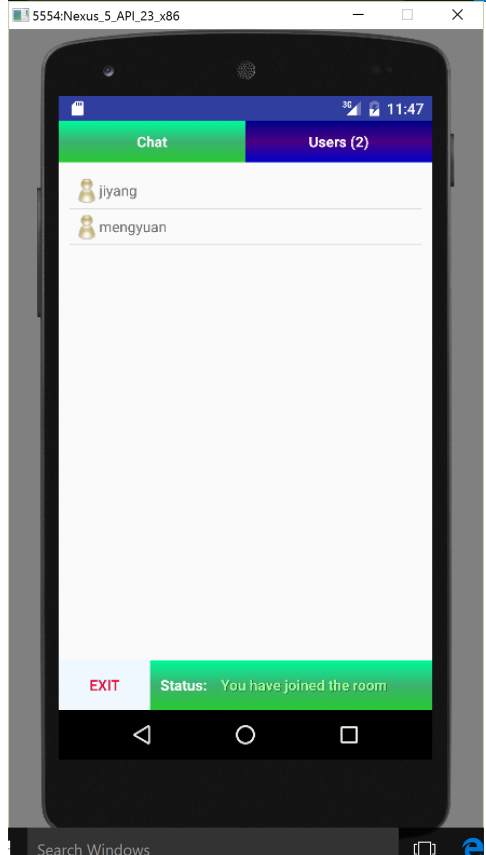

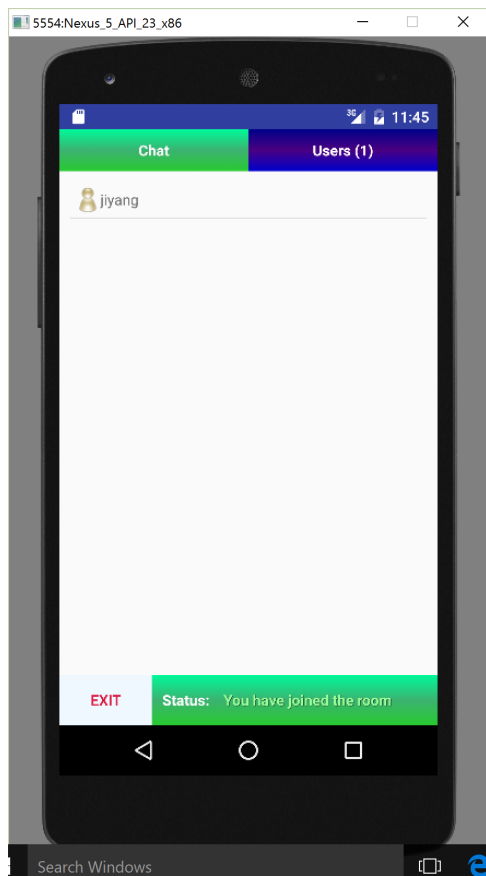

For main functionalities, the chatroom parts flow goes like below. When click chat in main page, it jumps to this page. In this page the user inputs the ip address, port number and his nickname which is used in the chatroom.

Then he can login to the chatroom.

The user can check who is in the room by clicking the Users at upper toolbar of the page.

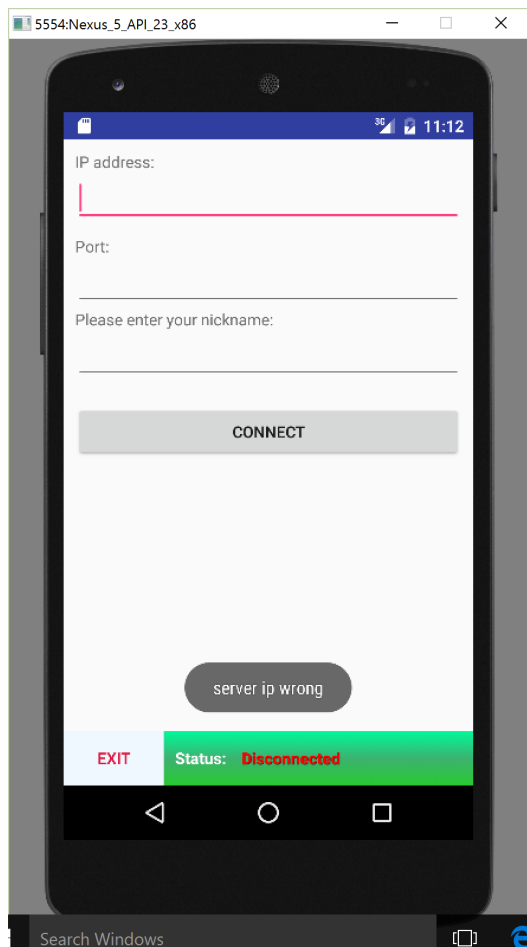

He can return to chat message by clicking Chat button at upper toolbar of the page.

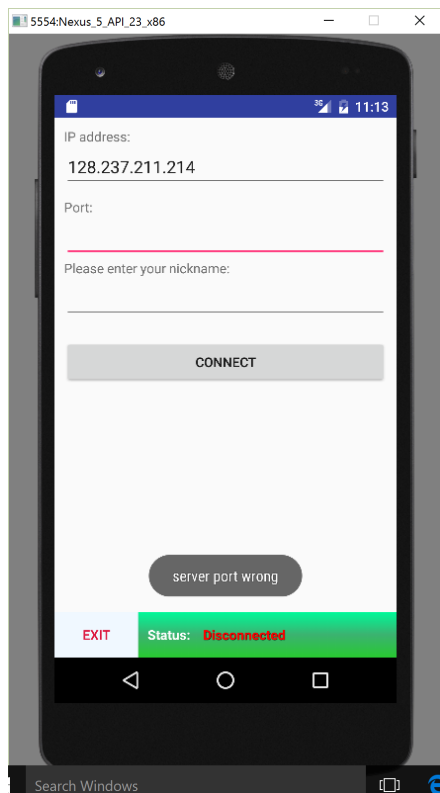

The EXIT button is for user log out. The information next to the exit button is the user connection status.

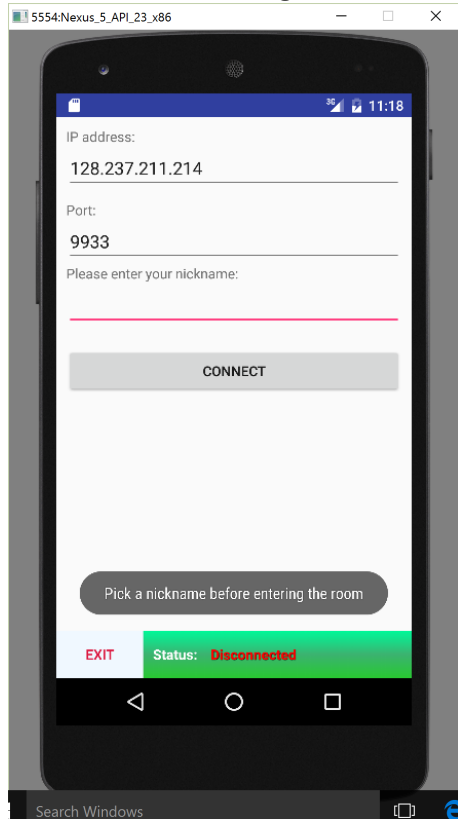

For exception handling, when user forgets to type server IP, it will show

When user does not provide port number to connect:

When user does not give himself a nickname

When the message is empty
